Name   **GroupBy**   **Version 1.0**

Updated by Jerome GRONDIN

Description

« Layout – Group By » aims to group a list of item and then display them by property or by alphabet.

Group by alphabet

□

Group by property

It's possible to group the item by a property of type "checkbox" or "dropdown list".

□

□

How to install « Layout – Group By»?

https://github.com/casewise/cpm/wiki
then Restart Evolve Designer

How to configure "Layout – Group By"

Configuration in Evolve Designer

In an index page – Group by alphabet**

- Add an index page
- Switch to **Layout Group By**
- If you wish to apply the "**Accordion**" to the top level, you need first to add "**Accordion**" behavior and then Switch the layout to **Layout Group By**
- Tick the option "**Group By Alphabet**"

□

In an index page – Group by Property**

- Add an index page
- Switch to **Layout Group By**
- If you wish to apply the "**Accordion**" to the top level, you need first to add "**Accordion**" behavior and then Switch the layout to **Layout Group By**
- Keep the option "**Group By Alphabet**" unchecked
- Specify the **Property Type Script Name** in "Or Group By Property"
- Make sure that the property is selected in "Selected Properties", it will make the property data available in JSON data.
- The fact of using "Layout Group By", it wills the items organized in 2 levels. If you wish to make both of them expandable, check the option **"Both levels are expandable"**
